

Structural Engineering is Libbey Heywood, Inc.'s business. Applying the Science of Engineering to structures is our Art. We are Structural Specialists who bridge the creative visions of our clients with an economically viable design.

This design philosophy distinguishes Libbey Heywood, Inc., and its predecessor Richard M. Libbey, Inc., among design professionals in Hawaii and the Pacific Rim since 1965. From landmark high-rise structures that define Honolulu's skyline to innovative commercial structures and private homes, we consult creatively and diligently to make our client's visions become reality.

We appreciate the unique challenges posed by each endeavor. Our extensive knowledge of structural materials: concrete, steel, wood and masonry, permits our clients to achieve their objectives in an efficient and effective manner. Our award-winning solutions focus on technical innovations and we individually tailor our designs to realize a project's goal required by our clients. Being a full service firm, we also offer an array of related professional and technical services that complement our design services. These include Value Engineering Studies, Forensic Studies and Opinions, Specialized Field-Testing, Due Diligence Reports and Special Inspections.

Whether working with clients at their offices in Honolulu or across the Pacific our service hallmark is to maintain a close working relationship built on responsiveness, diligence and technical competence.

In the following pages, we invite you to learn more about our organization, view some of our completed projects and browse a list of projects and clients we serve.

We hope you will allow us the opportunity to assist you in your next project. We look forward to becoming a part of your design team.

Aloha,

Steven C. Heywood
President
